

Individual Intensive Behavioural Intervention (IBI) Therapy Services

What is IBI Therapy?

Intensive Behavioural Intervention (IBI) is based on the principles of Applied Behaviour Analysis (ABA). Generally, IBI refers to working in a structured way with children, either one-to-one or in a small group, using positive reinforcement to shape behaviour. The child receives a high level of behavioural intervention with clearly defined strategies and goals. Systematic behavioural teaching methods are used to build and generalize skills. Programs are individualized to the needs of each child, and changes to programs are made based upon direct measurement of each child's learning.

IBI Therapy Information: Individual therapy services are available for one-to-one sessions with an Instructor Therapist at one of our KidsAbility locations under the supervision of a Board Certified Behaviour Analyst (BCBA) who will oversee your child's programming. In-home therapy sessions can be arranged however, they will be subject to additional charges for mileage.

Cost*: \$75 per hour

Total hours of therapy per week and duration of therapy will be determined in consultation with the family. Depending on the goals selected, this service could take place in the home* or at one of KidsAbility's locations.

Hourly rate includes: Resource and scheduling coordination; trained Instructor Therapist team; supervision by a registered Board Certified Behaviour Analyst; Instructor Therapists & BCBA site travel (to KidsAbility locations); therapy supplies and programming materials.

*Additional mileage charges will apply for in-home therapy services.

Session Dates: To be determined in consultation with families. Please contact Firefly for details.

Note: This program is offered in response to the recent provincial changes to the Ontario Autism Program.
